PATENT-PENDING VACUUM & TURBO HOSE QUICK-COUPLER SYSTEM FROM OOMPH! LABS: ESSENTIAL FOR HOT RODS, BENEFICIAL FOR RACECARS

Hose Candy™ from OOMPH! Labs makes every hot rod more alluring and every racecar more serviceable. With patent applied for, this new and unique system converts all vacuum and turbo hoses to a quick-coupled setup, eliminating broken fittings or barbs during removal or troubles with unyielding, rigid hose ends.

They connect and disconnect in a moment with half a twist of your finger and thumb.

Features:

- Eliminates power-robbing vacuum leaks
- Withstands high under-hood temperatures and rated for -30 inches of vacuum and 135 P.S.I. of pressure
- Employs *modular product architecture* enabling the color-coded lines and fittings to be formed in dozens of different configurations.
- Functions with all vacuum or pressure actuated components including: turbo systems, vacuum-operated carburetors, air intake systems, vacuum-advance mechanisms, EGR fittings, evaporative emission controls, MAP sensors, crankcase breathers, boost controllers, even wiper systems, transmitting either vacuum or fluid
- Allows vacuum and pressure gauge readings to be taken in seconds with a quick-coupled tee in place and diagnostic equipment connected
- Features CNC aluminum rotating collars that snap onto molded nylon male hose ends that connect to corresponding nylon female flanged hose ends
- Engages a variety of colors and the nylon molded hose-end connectors accept virtually all common hose sizes including: 1/8, 5/32, 3/16", and 1/4-inch (3, 4, 4.75, & 6.25, mm)
- Accommodates OEM and aftermarket hoses; OOMPH! Labs also provides silicone hose in a variety of colors and bore sizes
- Packaged in a multi-car kit (\$99) or a one-car kit (\$59), all of the above components are provided plus a selection of rubber fittings, both straight and 90-degree styles (for PCV valves, vacuum, and boost connections), as well as visually striking yellow shrink-tubes to create an attractive effect at hose ends

In this attached release you will find not only a new product but also one with a patent-pending that is obviously unique. From the fertile brain of Jon Petty, the inventor of the MaxPro reverse bleeder for brake and clutch systems, Hose Candy is an intriguing quick-coupler system for vacuum and turbo hoses that connects and disconnects small-bore hoses in a moment with your finger and thumb, eliminates leaks, and looks terrific.

Note: Hose Candy is not recommended for fuel lines or transmission lines or any lines carrying vital pressurized fluid.
